

In which Team are you?	When did you receive the task from your advisor?	Have you started to work on the project before you met the other team?	What was good in the project (in your opinion)?	What positive feedback would you give the other Team?	What constructive criticism would you give the other Team?
Team Kenya	9.16.2013	No	getting to know how to use raspberry pi and other tools. Developing the occupancy project, it was mind opening.	Team ITU were very good at keeping time and updating us on a regularly basis.	no comment
Team Kenya	9.27.2013	No	It was an opportunity to meet ITU guys and make friends. We learnt a lot. Plus, i like the way Theresa coordinated and documented the meetings.	At first there was a lot of assumption and mis-communication on what info we had (Team Kenya). I like the fact that ITU were patient with team Kenya and they helped us catch up in the project. In addition, they gave us a chance even though they had an upper hand(they had raspberry pies, we didn't)	I think earlier on team Kenya felt that team ITU were expecting too much from us. At times the tone used in email replies, skype chat and some communication was a bit harsh. Though this changed with time.

In which Team are you?		Do you believe you did your best to make this collaboration work?	What would you do different when this project would be repeated?	What went wrong in the project (in your opinion)?	Any other comments
Team Kenya		Not to my best no.	Put more effort to it, especially if i didn't have other projects.	Lack of focus on my part, my pending projects took up time for the collaboration project	Hoping to work with team ITU again.
Team Kenya		Yes, considering we had to work parallel to school and work. What we achieved and yet to accomplish is/will be amazing.	I would have advised both teams to share all info that they have about each other and what they expect from each.	Delayed purchase of Raspberry pie therefore team ITU had an upper hand :-)	I enjoyed working with team ITU, if we got to understand the project better in the earlier stages as we do now, i think we would have achieved even better results in terms of communication, implementation etc. Note: The project flow was good, and meeting every week was a brilliant idea.
